- Disassemble equipment to gain access to defect, using hand tools.
- Requisition parts or materials.
- Test equipment performance, focus of lens system, diaphragm alignment, lens mounts, or film transport, using precision gauges.

SUMMARY

Right now, I'm working with Saudi Aerospace Engineering Industries. My responsibilities are performing routine checks and repairs, keeping records of inventory, and identifying faults with components of the plane. Before that I graduated from International Aviation Technical College. My major is Aircraft Maintenance Engineering. During the school time, I have been working on three different systems: airframe, power plant and avionics, on aircrafts, such as CASA and Cessna. I developed my skills in communication, working under pressure, and multi tasking. In the future, I'm looking for to combining my skills and education to reach the career targets.
