

Personal Statement

My name is Feras Mohammed Alkhaldi, I am an international student from Saudi Arabia, sponsored by the education ministry. I received a scholarship from the ministry to study chemical engineering in the United Kingdom. I chose this course because it was my dream since I was a child to be an engineer. Chemical engineering suited me best because I wanted to help make a change in my country and progress it into the world of alternative energy. My uncle who is a chemical engineer helped me get a better idea on how it is like to be a chemical engineer which made me love the topic even more. I received high praise from the rest of my family for having a goal in mind that would benefit my life and the lives of the rest of the country. I chose to study abroad to get the best education possible from one of the world's leading universities. I have completed the foundation, first and second years at the University of Leeds. I wanted to transfer because I suffered from health and family issues, unfortunately the circumstances were hard on me and I chose to continue my studies in your university because the ministry of education recommended it to me for its well known high ranking and great reputation.

I took a training course for two months in Saudi Arabia, to get experience as a chemical engineer at the Saline Water Conversion Corporation (SWCC), which is the corporation that will hire me after graduation. Participated in multiple charitable works that helped give the homeless food and clothes during winter times to give back to the community that I lived in for three years. And I was the treasurer for the Saudi student society at the University of Leeds which is a role that allowed me to organize multiple activities with other societies in the university.

Best regards,

Feras
