To whom it may concern,

My name is Dr Garth Stephenson and I am a lecturer at Deakin University Medical School in Geelong Victoria teaching HMM203 Human Anatomy within the Medical Biotechnology, Infection and Immunity streams of Deakin's Biomedical degree. Abdul Albalawy was a student in my unit who complete HMM203 in trimester 3 of 2018 which was finalised February 28th 2019. Abdul is a hard working student with great interest in the human body. He is a studious student and attended all his classes bar one for the trimester resulting in a final unit grade of 83% (HD) for his hard work. Abdul has no problem approaching staff for clarification of concepts or further information and was a regular presence after classes to feed his understanding and need for more information. He was also equally receptive in anatomy labs with regular discussions with demonstrating staff. I find Abdul a dedicated and genuine student with a goal to be involved in the medical profession and a drive to learn all he can about the human body. I therefore think he would make a great medical student.

Best regards

Garth
