

My interest in science dates back to my years in middle school, where I excelled in physics, chemistry, and maths. When I was in the 11th grade, I took a course in technology at al-faisal university (such an advanced-level class was not available in secondary school) and passed it successfully . It seemed only logical that I pursue a career in technology and science.

When I began my secondary school, I had the opportunity to be exposed to the full range of science courses , all of which tended to reinforce and solidify my intense interest in science. I've also had the opportunity to study a number of subjects in the humanities and they have been both enjoyable and enlightening, providing me with a new and different perspective on the world in which we live.

In the realm of science and technology , I have developed a special interest in the field of computer and engineer and have even been reading about it occasionally .

Of course, my plans following completion of my current studies are to move directly into undergraduate work toward my bachelor's. After I earn my bachelor degree, I intend to start work on my master's in engineering. Later I would like to work in the area of research and development for private industry. It is in R & D that I believe can make the greatest contribution, utilising my theoretical background and creativity as a scientist.

Regarding the volunteer side , i took a part in the family affairs council ,working for the child advisory committee.I also took a lot of leadership courses and communication .

I am very aware of the excellent reputation of your university, and my conversations with several of your alumni have served to deepen my interest in attending.

I hope you will give me the privilege of continuing my studies at your fine institution.
