

As a major element of the justice system, I decided to further pursue my graduate studies and specialize in Forensic Science. I believe that it has a noble goal of helping innocent suspects or assisting in finding the guilty. I am writing this statement of purpose to attain a Master's degree in Forensic Science from one of the prestigious institutions around the world, King's College London.

I decided to enhance my professional career and pursue my goal of having a significant role in achieving justice within the criminal system. I believe that by specializing in forensic science, I would be able to acquire advanced knowledge and important skills to well-serve the field. In other words, attaining an academic degree will equip me with the knowledge required to handle various pieces of evidence and their examinations, besides developing laboratory skills that will help in examining such evidence found. However, I am aware that the process to reach such results does not only require analyzing crime scenes, but also knowing how to collect evidence, how to take photographs, how to make sketches, and how to record the findings. But the main goal relies upon examining and analyzing evidence from the crime scenes to reach fair and just answers. I consider it to be a rewarding yet challenging profession since it aims at ensuring public safety by finding criminals and supporting the victims and their families by implementing different techniques like DNA and fingerprint analysis.

First, I would to begin with a brief introduction about myself and my previous experiences and achievements. My name is Munyah Hariri. I hold a Bachelor's degree from the University of Jeddah Faculty of Science in Applied Biochemistry. I also hold a Diploma from Stanford University in Emergency Medicine and a License in Emergency First Response as a First Aid Instructor. I am a trilingual with excellent proficiency in Arabic, English, and French. I possess great skills in teamwork, communication, critical thinking, time management, and problem-solving, besides other technical skills with programs like Microsoft Office and SPSS Data Analysis. I have been attending several courses to build profound knowledge in my field and in the field of Forensic Science, in particular. I received professional training in Al-Amal Hospital and Saudi Standards (SASO), and joined a summer research institution at King Abdullah Medical City (KAMC) gaining valuable experience in both laboratory training and research. Furthermore, I held major voluntary roles with various purposes to serve my community in different organizations including the iGene Research Center, the Ministry of National Guard Health Affairs, King Abdul-Aziz Medical City, the Ministry of Health, and the Saudi Civil Defense. Now, I have set my goals to establish a profound career through which I can further serve my community and humanity, in general.

My decision to study abroad at King's College London comes from my desire to have great exposure to the field I am extremely enthusiastic about and learn from the international body of professionals who gathered to share and exchange their rich and unique experiences and knowledge. I believe that my pick for King's College London will lead me to achieve my goals and aim for improvement and excellence. The excellent academic curriculum with its great teaching and guiding team will ensure an enriching learning experience. Nevertheless, receiving specialized practical training with such outstanding standards will also encourage growth and progress. Also, the vast cultural diversity at King's College London makes it the best place to meet, interact, share, and learn different knowledge, experiences, ideas, and perspectives all at one go. I believe this great opportunity that can hardly be found anywhere else.

I hope you would accept my application to join your prosperous community at King's College London and attain a Master's degree in Forensic Science.

Sincerely,  
Munyah
