

Personal statement

This is Ahmed Aljumaiah raised in Saudi Arabia. I was interested in studying engineering, but I was not sure which discipline to choose. I spend a lot of time reading about the differences between the fields. In the end I decided to choose electrical engineering since Saudi industry back then seek electrical engineers. Because of this reason I thought it will open doors for me and give me fulfilled life in the future. In 2019, I went to Australia to get my degree from RMIT university. In 2022, I completed my degree in electrical engineering. Now, I am planning to apply for a Master of Globally strategy and sustainability to enhance my academic knowledge and experience. It will give me better opportunities in my future career. This course would be related to what I studied in my bachelor's degree as an electrical engineer. During my bachelor's degree I have learned technical and theoretical understanding in the field. However, engineers can be in managing roles since they have basically gained soft skills during their study such as communication skills, leadership and problem solving. I decided to do my master's degree in globally strategy and sustainability because there are plenty of projects and sustainable cities that are based on renewable energy. Saudi vision 2030 is comprehensive which include the empowering our society, economy, and education. These factors cannot be done without having excellent managers who are passionate about achieving goals. I have researched that MSc of globally strategy course are designed to give students solid understanding and qualify them to the industries. Getting such a knowledge can obtain the flexibility of taking different size of project. I prefer UK universities because they have a high and excellent education system. They have top 100 universities that are internationally recognized. It would make me have unique learning qualification and knowledge. The experience that I would get in UK universities is not only in classroom, but they would offer more beyond by meeting professional experts in the industry. I am confident to demonstrate the drive and ambition to position myself as the perfect student to study there.
