

As I approach the end of my high school years, I reflect on the experiences and opportunities that have shaped me into the person I am today. From a young age, I was brilliant and had a natural curiosity for how things worked. It was this love of mechanics that eventually led me to discover my passion for mechanical engineering.

I am excited to pursue a career in mechanical engineering because I see it as an opportunity to use my skills and knowledge to make the world a better place. Whether it's developing more efficient and sustainable technologies or creating innovative solutions to complex problems, I believe that mechanical engineering has the potential to truly change our society for the better.

Outside of the classroom, I am an avid athlete and a hard worker. I have been swimming competitively since the age of 12 and I have competed in many national competitions here in Saudi Arabia, where I have been able to showcase my skills as a competitive swimmer. Most recently, I qualified for the finals in the 50m breaststroke event at the Saudi Games 2022. I am currently a member of AlHilal Club, where I am constantly improving and motivating my fellow swimmers to do the same.

In addition to my athletic pursuits, I am a skilled multitasker who is always looking for new challenges to take on. Whether it's volunteering at sporting events or working on personal projects, I am someone who is never satisfied with just getting things done. I take pride in my ability to excel at anything I set my mind to, and I believe that this determination and work ethic will serve me well in my future academic and professional endeavors.

Finally, I am proud to say that I scored 1550 on my SAT exam, which demonstrates my intelligence and academic abilities. I am confident that my strong academic record, combined with my passion for mechanical engineering and commitment to excellence both in and out of the pool, make me an ideal candidate for the Mechanical Engineering program at your college.

Thank you for considering my application and I look forward to the opportunity to contribute to your university community as a student of mechanical engineering.
