Personal Statement

Ever since I was young, I've always found interest in what BSc computer science focuses on. I was keen on learning about how it works and what is done to do so. For that, I have kept this as my goal during most of my academic journey. To learn and work on everything myself too. I worked hard to achieve what I would need to be able to reach my goal. Now is the time to put my dreams into action. Because of how much it interests me, studying this subject will feel like a reward for all my hard work during these past few years. Not to mention, everyone works best when it comes down to something they love and have a strong passion for. For me that's computer science, so studying this as a subject will make me work double as hard and triple as good. I'm a very determined person, and I am up for any challenges I may face. I have the will to study this subject and to pursue it as a career after. I have strong analytical skills, I'm able to work well under pressure, and I am organized with my time. These are just some of the skills I have that will be needed and that I believe will make me succeed. I want to study this subject in the University of Manchester for several reasons. The more I found out about this university, the more I wanted to start learning already. First, it is one of the best universities in the United Kingdom. It has an advanced ranking among other educational institutions. I believe that studying at the University of Manchester will further my academic development in a way that I would love. It is also located in Manchester, my favorite city with campuses that are beyond amazing and special facilities that aren't found anywhere. Therefore, I believe I will have an excellent student experience in the University of Manchester. It is exactly what I need to fulfill the dreams I have, and it will give me a strong educational background for a promising career in the future.
