

## **Statement of purpose**

My name is Khaled Al manea , from Saudi Arabia . I studied at Glasgow Caledonian university in the UK and graduated of BSc Adult nursing studies. I have always dreamed that I completed my educational journey in the UK which has great scientific and many internationally-ranked universities; after graduating I worked as a nurse in Emergency & accident department in Riyadh and I had a chance to practice what I learnt in my bachelor degree in the UK.

I am keen and interested to undertake the MSc public health course in the UK, to fill in an academic gap in knowledge and skills in the contemporary trending functional areas of health. My nursing background would give me the drive to move my career to increasing awareness of disease prevention. Successful completion of MSc public health degree would enhance my career prospects, enabling me to progress on to senior roles at either operational, policy or commissioning level in a wide range of areas. In addition, Public health research and practice is at the heart of tackling many of the world's current threats to health including the recent COVID-19 pandemic.

The reason why I chose Public health is that my fully believe in the importance of this field. During my work at the E&A department, I have noticed increase number of patients from all ages with chronic disease, obesity and lung diseases due to smoking etc. At that time, I though can we really avoid these diseases; and what can be done to reduce the huge number of patients diagnosed with these diseases. So, after I did some research and read many articles from reliable sources, I found that public health contributes to reducing the causes of ill-health and improving people's health and wellbeing. Through the prevention of health issues, individuals can spend more of their years in good health.

I have seen all the conditions required by those responsible for your master's degree, all of which apply to, and the financial ability to pay tuition regularly, and there are no problems with that, knowing the absolute commitment and diligence and perseverance in respect of the study, I also like the atmosphere of educational competition, and the constant knowledge of everything that is new.

Science has no borders, no homeland, and the human being to move and migrate in order to obtain knowledge, and motivated by curiosity innate, and identify that is new, and I continue to follow the impact of successful people.
