

Statement of purpose

My name is Roaa Mohammad Abu-qazan I am a Jordanian live in Dubai and I want to apply to study (cancer science MRes) , I studied medical laboratory science at Jordan university of science and technology and graduated with a GPA (3.07) , Rate (very good).

I have been passionate about science since I was young,I loved biology and chemistry classes and I always dreamed of completing my education the reason for this is because I want to expand database of information I have.

The United Kingdom is my dream because it has the most prestigious universities and the strongest,it has many internationally- ranked universities, which has great scientific and technical elements, and because it is taught in English which is the official language around the world today.

I chose The university of Birmingham because it is thriving campus with it is beautiful grounds the historic red-brick buildings and glorious green spaces ,friendly community, excellent facilities and it has the most beautiful academic library (state of the art) it's described as heralding a new generation of libraries in UK higher education and it's special location at the heart of the university,but the most important reason to chose the university because it is one of the top 100 universities in the world also it has the largest international student communities in the UK , finally it's known that the university of Birmingham always supporting it is international students.

As for the cancer science I chose it because I lost my grandma in cancer so I decided to understand what cancer is? Through the laboratory research project also it's a common disease so if a cure is not possible, the research will xtend and improve the quality of life remaining and provide effective palliation of symptoms by work to the development of highly targeted novel therapist and to know more about anything related to cancer from cancer causes and diagnosis to treatment,this was my motivation for considering to chose this course

Also, I am looking to be an academic in the future and I think this course is suitable for me because I will gain practical skills, scientific communication skills and more skills that are taught throughout the program

I have seen all the conditions required for your master's degree,all of which apply to, and the financial ability to pay tuition regularly, knowing the absolute commitment and diligence and perseverance in respect of the study, I also like the atmosphere of educational competition, and the constant knowledge of everything that is new.

On the other hand, I like to ride a bike,read novels,meditation also I like to be optimistic and positive and I am optimistic that my application will be accepted
