

As a student with a strong interest in technology and the formidable possibilities it offers. I am captivated by the endless possibilities of Artificial Intelligence. As the world becomes increasingly dependent on technology, it seems only natural that AI will play a pivotal role in shaping our future.

I remember bringing my passion to life when I was 13 years old in the computer lab at school we were working on programming a robot to walk on the black line. From the moment we started working on this project, I realized my love for this field.

I studied computer science in high school for two years and enjoyed every bit. In the 11th grade, I was appointed as a member of the Student Dialogue Council and the Mentoring and Counseling Group. I learned a lot from this opportunity and became more responsible, organized, and resourceful than ever before. I never became stagnant in my life for even a minute. During all this, I didn't forget to pursue my passion, so I was attending technology conferences such as Misk Global Forum 2022 and Leap 2023.

consider myself lucky that I was able to identify my passion from the very beginning, and I was able to pursue it. Despite many obstacles, I never lost hope and kept working hard to achieve my goals. The main reason behind my unbridled passion is the vision of my country, the vision of Saudi Arabia 2030. This ambitious vision laid the foundation stone that defined three main themes: a vibrant society, a thriving economy, and an ambitious nation. Being a teenager from an ambitious nation makes me ambitious and excited to gain the experiences and skills to be an active member in the success of this vision.

During this phase of finding myself, I joined several football academies such as the FC Barcelona Academy and the World Football Academy.

Having been involved in all such activities, I have shaped my way to my dream career. I was equipping myself to be able to study artificial intelligence and computer science at Queen Mary university. I hope to be admitted into your prestigious institute and excel in the domain of computer science and artificial intelligence. My story may not be inspiring to everyone, but it is full of emotion and harmony. My journey started with love, joy and real-life lessons. I would like to start a new chapter of my story at Queen Mary university. I am certain that the detailed courses and modules in your program on Computer Science and Artificial Intelligence would add tremendous value to my expenses.
