

Personal Statement: University of Dundee

After enjoying every clinical rotation during my applied medical sciences school, I successfully completed my training in Radiological science, and was certified by the Saudi council for health specialization, in January 2018

I start my Job as radiation specialist and I moved to four different hospitals in which I faced a lot of cases, emergency and chronic, stable and unstable patients, diagnostic and intervention radiology.

In 2020 I was working with first line team who was facing covid-19 patients and I believed that my career is crucial in helping these patients, following their progress, sharing their daily plan and helping them specifically and my country overall.

I look at the upcoming years as an active member of your medical imaging master program. I would like to enjoy the good academic reputation of your program, under the supervision of a dedicated faculty to education and research. My intentions are not only to learn about existing knowledge, but I would also love to be involved in the research.

I am highly motivated and enthusiastic to meet the challenge of your master's degree. As well-rounded individual with good communication skills, I have the ability to adapt to a new environment and work well with others. My personal quality and experience, demonstrate my potential as a good candidate for your program.

Years of hard work have ingrained in me many important traits. I developed the ability to communicate with people at various levels. I also learned the importance of having a commitment to the community. These traits could only have been achieved in a team setting. My strong determination and drive to complete the task was demonstrated by the challenge of successfully completing a training program and starting another. Together, these experiences allowed me to appreciate the value of perseverance resulting in the benefits of others.

I see myself as a hardworking young man who is dedicated to learning. I will be an active member of the medical team and work hand in hand with my colleagues involved in the care and management of those who are in need. When I complete my master's

degree, I would be returning back to my country to start a clinical practice, as well as an academic career as my institution is developing a state of the art medical school and a research center.
