

## **Personal Statement**

**Submitted by: Amjad Sulaiman Aljaybali**

**As a requirement for admission into Master program in the Artificial Intelligence at Queens University.**

Primarily, I would like to expound on my aspirations for my future career. I am ardently desirous of rendering service to the world by contributing to the development of technological tools and augmenting productivity levels. This would invariably enhance my prospects of being selected by top-notch IT corporations and companies, doubling my chances of employment.

Furthermore, I anticipate that obtaining international qualifications will strengthen my resume and heighten the likelihood of being recruited by organizations that require my specialized expertise. My keen interest in programming, as well as web and graphic design, was fostered during my undergraduate tenure at al-Qassim University, where I pursued a Bachelor's degree in Information Technology.

As a graduate student in the field of IT, I contributed meaningfully to my university's IT departments by completing programming tasks. Additionally, I served as an IT trainer at a computer academy in Saudi Arabia that provided brief IT courses. These experiences, coupled with my fervor and enthusiasm, prompted me to continue my education in the IT discipline. Although IT is a logical extension of my undergraduate training, I am committed to pursuing this path and augmenting my knowledge and skills through a Master's degree program in IT at your esteemed university.

During my undergraduate tenure, I was particularly captivated by programming languages and artificial intelligence, and their potential to ease the lives of people and businesses alike while minimizing errors that may result from unskilled workers. I am, therefore, eager to further my interests and expand my knowledge and expertise by pursuing a graduate degree in IT at your esteemed university, where I anticipate gaining invaluable international experiences that will enhance my personal skills and augment my career prospects.

Furthermore, I will be grateful for the rare opportunity comes from one of the largest universities in the United Kingdom, as well as the chance to be sponsored by my employer for the next three years to undertake this project. This opportunity is truly exceptional and is unlikely to be extended to many students, unless they are exceedingly fortunate.

I am, therefore, applying with a sense of profound optimism and determination to secure a place at your university and to devote the next year to acquiring new skills, gaining academic insights, and examining various resources that will facilitate my personal and professional growth. I firmly believe that this endeavor will not only enhance my personal skills but will also enhance my career prospects and elevate my chances of securing a coveted position with a top-tier international or local high-tech firm.
