

As someone who has always been interested in the complexities of businesses and the economy in general, I have opted to concentrate on economics and business, with a focus on economic management. This topic of study offers a unique combination of academic concepts and practical applications that may be used in a variety of companies and circumstances.

My interest in mathematics and critical thinking has impacted my academic background. As part of the International Baccalaureate curriculum, I studied Mathematics AI HL and Business Management HL, which provided me with a firm foundation in the basic concepts and theories that support economic analysis. Mathematics AI HL enabled me to think critically and logically, whereas Business Management HL provided me with a broad understanding of how organizations run, from financial management to human resources and marketing. These courses have assisted me in developing a rigorous and logical approach to problem-solving, which I believe will be useful in the field of economic management.

The analytical and problem-solving components of economics management drew me in. I had always enjoyed math and statistics and saw economics management as an opportunity to put these talents to use in a practical situation. I was especially curious about how firms make decisions, allocate resources, and respond to market forces.

In addition to my academic interests, I have taken various online courses to expand my knowledge and skills in economics and business. A microeconomics course offered by Alfaisal University struck a particular chord with me. This course provided me with a more in-depth understanding of consumer, corporate, and market behavior, as well as a more nuanced comprehension of economic principles. I also took a financial accounting course, which provided me with a good foundation in the basics of financial reporting and analysis. These classes have helped me apply economic principles in real-world situations and have given me a better grasp of the subject.

Mariana Mazzucato's book "The Value of Everything" has had a big impact on me. This book challenges the widely held belief that the market is the sole arbitrator of value and advocates for a more comprehensive view of value generation. I was especially taken by the idea that governments and public institutions may play an important role in creating value and that their contributions are sometimes disregarded in our current economic system. This book has pushed me to think more critically about the role of government and public institutions in the economy and to work toward a more inclusive and equitable economic system.

Overall, my interest in economics management stemmed from a combination of curiosity about how markets and businesses operate, an understanding of the importance of economic theory and analysis, and a desire to make a positive impact on society. I regarded economics management as a field that could give me the tools and knowledge I needed to pursue a diversified and exciting career while still making a positive contribution to society.

Looking ahead, I am enthusiastic about the possibility of a degree in economics and business challenging me in new ways and broadening my knowledge. I know that having a thorough understanding of economics and its fundamentals will be an asset whether I work in finance, marketing, or human resources. I am eager to make a meaningful contribution to the world of economics and business, and I feel that my enthusiasm and drive will enable me to accomplish so.
