

My name is Khaled Al Anzi. I am from Saudi Arabia and live in Riyadh. I work for the King Saud Medical City, at the Intensive Care Unit, and have been in the front lines during the Corona Epidemic.

My aim is that, I am planning for my Master's Degree with a strong desire to expand my knowledge base that I have in my nursing speciality, which will make me successful in the professional field in my future, especially, as this field requires continuous learning and self-improvement up to date, and preferably a master's degree.

I have done many projects during my university career, and I have always dreamed of completing my learning journey. I have worked as a nurse after I graduated from university, I have developed myself a lot in this field, I have worked hard, learned a lot, worked with all sincerity and dedication, and I have received a lot of material and moral estimations from my leaders.

At this turning point in my life, I wish to study again and obtain a master's degree, by joining your distinguished university, as I have gained extensive information about the university as well as the other testimonies from colleagues. One has to keep up to date of knowledge in his profession, and must be a part of that innate curiosity, simply because knowledge has no borders.

I am looking forward, therefore, that this application will gain your satisfaction and acceptance, and result in joining your respected university.

With Best wishes.
