

Dear Sir/Madam,

In a world of increasing environmental pollution, my interest in science and the environment and how to preserve it has increased, especially after the burning incidents that occurred in

France. There is a large percentage of people who are ignorant of the issue of the environment and how a person's behavior and daily habits affect our planet deeply. That is why I started researching and reading about renewable resources. Every time, I am amazed at the number of resources that we can use instead of fuel, such as solar energy, wind, or even the oceans.

When I finished high school in the scientific track, I got a high average because I am a student who loves science, mathematics and complex issues, and I always had the desire to study and continue to develop my information and studies. I got GPA 96.45% in high school.

Also, in the Kingdom of Saudi Arabia, we have a test that every student takes at the end of high school to know his abilities in mathematics and arithmetic in complex and advanced issues. I also got 95% because of my great love for mathematics, and this proves my great interest in engineering.

When I applied to study higher studies, which is a bachelor's degree, I applied to the best university in the Kingdom of Saudi Arabia, as it is one of the best 5 universities, which is

Imam Abdul Rahman bin Faisal University. I studied the foundation year in the scientific track and got a GPA 4.7 out of 5. Also, I was honored by the Deanship of Admission and Registration because I was of superior student.

And when I finished the foundation year, I applied to study physics renewable energy, and it is the only university in the Middle East that offers this course, and it is among the four universities that offer it around the world. Because I have studied for two years now in the course, I now have experience and knowledge in how to extract energy, how to benefit from it, which one is the easiest, and which one is more expensive. I noticed that I enjoy every time I learn something about energy or how to extract it, and because I have high ability and skills in mathematics, I wanted to combine my love for energy and my interest in providing a good and cleaner environment, as well as my love for energy, so I want to apply for a renewable energy engineering course. I am currently studying in the second year of the physics renewable energy course at Imam Abdul Rahman bin Faisal University, and this has gained me experience and knowledge of how energy is function. But because of my desire and dream since my childhood, I wanted to complete my studies abroad and in the best country to study, which is the United Kingdom. I took the IELTS UKVI test my score is 6 overall (L:6, R:5.5, W:5.5, S:6). I hope to complete my studies with the most interest course to achieve my dream, which is to make the environment cleaner and be part of the development and replacement of fuel with natural resources that do not destroy the environment.

If there is any question, you can contact me via e-mail.
