

Personal statement

I feel confident enough to excel in the sphere of Architecture with hard work, ingenuity and permanent renewal that has become part of my personality. This major will support my passion while providing me with a great career path in Saudi Arabia. Also, Architecture is a discipline that will allow me to develop exceptional skills that would merge with my passion for exploring the planning, structuring, design, inspiration, technology, and out-of-the-box ideas at play before, during, and after the planning. Advancing my knowledge in these aspects has been my primary concern while choosing a career path. It is worth mentioning that I have a full-covered scholarship. At the University of Hail, I have achieved all that can be accomplished. I completed my bachelor's degree in education with a GPA of 3.65 (out of 4), excellent with the second-class honour. It was one of the most fruitful and successful experiences I have had in my life. I must mention the appreciation and encouragement received from my professors, which further reinforced my ambition to pursue my higher degree. The turning point in my life happened when I worked for a construction company, my position allowed me to look at Architects and engineering plans. Some designs lacked innovation, creativity and the link between designs and future developments. When I noticed these missing pieces, I made sure that I want to be one of the few people who put these pieces in their design. My curiosity prompted me to attend some online courses from which my interest in the sphere emerged. I was definite about the future direction of my studies knowing well that Architect would be my profession. Nonetheless, I was certain that my growing interest in the field couldn't be fulfilled at this level, and I need to learn further. Having the opportunity to be enrolled in the Architecture program at your university, one of the most esteemed universities in the UK. Firstly, when I analysed the structure, I realized that this is what I want to study it, blending studio work, design, art, technology, Humanities, and making the design interactive with humans. Secondly, I understand the faculty is exceptional in terms of cultural and intellectual composition and that it will assist me in comprehending what I learn. My favourite Architect is Zaha Hadid she distinguishes her designs is an artistic and philosophical background. It tends to be suited the surrounding society. She puts her design in an irregular geometry in horizontal or vertical lines that are characterized by durability for use. Iron in her designs to withstand high levels of tensile strength and pressure. And her clearly influenced by the pioneer of modern architecture Oscar Niemeyer in adopting his idea of fluidity in all forms also influenced by the Deconstruction school I saw her influence in these ideas through her project in my city "Riyadh metro station". recently I visited the windmill green building in Manchester the building has the most innovative solar PV panels ever installed in the UK and has highly efficient glass and low-wattage LED lighting throughout the building to decrease energy usage. Whilst turning to energy-saving equipment is a great way to reduce our carbon footprint the wall in the foyer, made up of thousands of different plants that spend their day drinking in carbon dioxide and dispelling oxygen, leaving the area fresh and clean. I respect the architects who put sustainability in their designs, and I will be one of those architects in the future. Finally, studying abroad and working beside new colleagues would offer such a unique experience. I improve my communication skill and team spirit, which would enable me to cooperate with others in the student community. Accepting me as a student at your university is such an honour and for me to maintain my study. Overall, I believe that this institute will contribute to my success as an Architect and as an individual
