

Name: Tariq Alshehri

Course applied: Medical Imaging Msc

The ultimate objective of my professional career is to provide the most qualified health care for the people with the necessary and professional skills to improve health care system, particularly in educational development, and to propose effective solutions for patients, I believe that working for a development consultant agency dealing with educational development projects will allow me to attain my goal.

At graduate school, I participated in awareness campaign for diabetes mellitus to educate people about the wrong behaviors, while I was dealing with them and made the glucose test I felt empathy, then I realized that, medical field is the place that I found myself in, because life is getting better when we help each other and giving is the best communication.

After graduating, I attended to King Abdul Aziz University and specialized in Medical Imaging department, I love how technology play a great role in medical field. While I was a senior student I worked as a volunteer in King Faisal Specialist Hospital and Research Center to get more experience about cancer patients, after I finished my bachelor's degree, I attended to King Fahad Security College and graduated as a First-lieutenant in Ministry of the Interior and working in military hospitals as a diagnostic radiology technologist, I work now as a head of Radiology Department.

To achieve my objective, it's imperative to get more professional skills in Medical Imaging field. I strongly believe that I need more sophisticated and wider knowledge. Thus, the education and development program at your institution is the best course for me to specialize and develop a deep understanding and better prepare me for my future goal.

In the academic course, I propose the following academic objectives. First, I want to gain a fundamental knowledge of educational developments, and pursue processes contributing to not only in radiological examinations development but complete patient satisfaction. Secondly, I want to learn a variety of special techniques that make me to be more advanced and effective in medical imaging. Finally, I want to understand health and safety considerations for imaging techniques.
