B.S. Degree in Mechanical Engineering at JAZAN University (2016)	EDUCATION
---	------------------

Professional background:

I have been included in many positions in many projects in Saudi Arabia, where I served as a project field supervisor at OILSERV Company from 2022 to the present. I also served for three years as a project engineer at GULF Asia Contracting LLC. During this period, I gained much experience in the area of project management work, particularly with regard to aspects of plans and reports to ensure constant compliance with project specifications. Executed quality assurance activities, checking project results

I felt proud of my work as a “project engineer” in the Dareen Port & Facilities Upgrade Project in the city of Qatif, which was implemented by HUTA MARIN Co. The project was owned by the SAUDI ARAMCO project. My primary job duties were supervisor of technicians on site, maintaining operational compliance, documenting daily progress, incidents, and issue resolutions for accurate site records.

I also obtained many professional training programmes, including Certified Project Management Professional (PMP) from Project Management Institute (PMI), Work Authorization Programme (WAP) from SAUDI ARAMCO, Contractors Work Permit Receiver Prerequisite (Hazard Recognition, Confined Space, Lockout/Tag Out) from PETROLUM & NATURAL GAS INSTITUTE, and Flow Line Safety Restraint System from AGORA Training. I also hold membership in both the Saudi Council of Engineers and PMI.

I have acquired many scientific and professional experiences and skills during my career in the field of project management work in the Kingdom through a combination of technical skills as a supervisor, engineer, and project manager, as well as through exchanging professional and scientific experiences with a distinguished group of national and foreign experts in the field of project management work, where I contributed to developing many technical aspects within the limits of my job with all the tasks I assumed. I had a firm belief in the role of the work team in achieving the project objectives efficiently and effectively. Therefore, I was keen to spread the spirit of teamwork, exchange experiences with the work team, foster constructive and purposeful cooperation, develop performance, motivate team members, develop their skills, and spread moral values and patriotism.

Motives for choosing Strathclyde Glasgow University:

My ambition and passion for the field of scientific research in the field of project management, and my constant keenness to provide a scientific addition to this field as a result of my national duty towards my country, prompted me to complete my education at the postgraduate level.

Obtaining a bachelor's degree from Jazan University in 2016 and my work as a project engineer and project manager had the greatest impact on motivating me to apply for a master's degree in this specialty. It increased my passion for scientific research, self-realisation, and learning about the developments of the current era in the field of project management to make an effective contribution in light of the Kingdom's Vision 2030, which paid great attention to this field as a tool for achieving sustainable development goals. This is what has become clear through many giant projects implemented by the Kingdom in all fields.

The University of **Strathclyde Glasgow** is my first choice for completing my master's degree, especially in light of what I learned about its role in supporting scientific research and motivating students at the graduate level to achieve scientific excellence and make effective contributions in various fields that aim to achieve comprehensive social and economic development.

I was keen to complete my academic studies for a master's degree and to be among the university's affiliates at this stage in order to seize this opportunity in order to achieve scientific excellence in the field of project management and to submit research proposals that may contribute to achieving the targeted growth in this sector at the level of the Kingdom of Saudi Arabia. Especially since the University of **Strathclyde Glasgow** has a direct connection to achieving my academic expectations and supporting me to contribute to achieving the vision of development for my country. It has many contributions in line with my expectations by preparing competent graduates capable of facing the challenges of the coming period and also by providing distinguished research that touches on the goals of Vision 2030 in the field of project management.

I would like to join the University of **Strathclyde Glasgow** a university that is based on a long historical legacy in the field of science, because I have scientific and professional experience in the field of project management for more than six years, and I possess the research skills that qualify me for excellence in the field of scientific research. at the university and submit a research proposal at the master's level that deals with one of the modern topics in the field of Project Management & Innovation, so that this will reflect on the development of my practical experiences and professional knowledge and for this scientific research to serve as one of the most effective research projects.
